

LaTeX labels: $y = \sin(x) + \frac{1}{2}\cos(2x)$

3D surface

Heatmap of A_{ij}

Box-and-whisker plot

Categorical scatter plot

Grouped bar chart with error bars

Overlapping histograms

Filled contour plot

Polar plot: $r(\theta)$

Five planes: mixed lines, points, and dotted projections

Compact equations

Inline math remains readable at small size: $e^{i\pi} + 1 = 0$, $\nabla \cdot \mathbf{E} = \rho/\varepsilon_0$, and $\sigma^2 = \frac{1}{n-1} \sum_i (x_i - \bar{x})^2$.

$$\int_{-\infty}^{\infty} e^{-x^2} dx = \sqrt{\pi}$$

$$y(x) = \sin(x) + \frac{1}{2} \cos(2x), \quad f(x, y) = e^{-(x^2+y^2)}$$

Small table

sample	mean	sd	<i>n</i>
control	0.12	0.55	80
method A	0.71	0.80	80
method B	-0.35	0.35	80

Small text block

This paragraph intentionally uses a compact leading and narrow margins. It contains punctuation, symbols, superscripts, subscripts, and a URL-like token: `plot_v2_small.pdf`. The layout should not clip the final line or the mathematical operators.

Figure labels

Axis labels can contain Matplotlib-style `mathtext` or LaTeX syntax such as x_1 , Δp , and $\frac{1}{2} \cos(2x)$.

Matplotlib image embedded at a compact width.

Embedded Matplotlib figures

normal, scaled, and slightly rotated placement

3D surface

3D surface, scaled to a minipage.

Box-and-whisker plot

Box plot rotated by 8°.

Heatmap of A_{ij}

Heatmap placed at a small negative angle.

Rotated figure placement

a figure rotated by an arbitrary angle inside a compact slot

LaTeX labels: $y = \sin(x) + \frac{1}{2}\cos(2x)$

Basic Shapes
